

Long Division with Remainders — Step by Step

Unit: Operations - Student Practice Worksheet

Overview: 456 sweets, 15 children, share them equally. Kabir's calculator said 30.4. He announced that each child gets thirty sweets and four tenths of a sweet, and the class started arguing about who would cut them.

Practice Questions (30 Total)

Section A - Easy

Q1. 4 into 84. Quotient?

$$4 \overline{) 84}$$

- ☐ A. 21
- ☐ B. 22
- ☐ C. 20
- ☐ D. 24

Q2. Compute $250 \div 5$

- ☐ A. 40
- ☐ B. 50
- ☐ C. 45
- ☐ D. 55

Q3. Compute $96 \div 8$

- ☐ A. 11
- ☐ B. 12
- ☐ C. 13
- ☐ D. 14

Q4. 5 into 125. Quotient?

$$5 \overline{) 125}$$

- ☐ A. 20
- ☐ B. 24
- ☐ C. 25
- ☐ D. 35

Q5. Compute $77 \div 6$

- ☐ A. 12 remainder 5
- ☐ B. 12 remainder 6
- ☐ C. 13 remainder 1
- ☐ D. 11 remainder 11

Q6. Compute $63 \div 7$

- ☐ A. 8
- ☐ B. 7
- ☐ C. 9
- ☐ D. 6

Q7. 4 into 200. Quotient, including any zero?

$$4 \overline{) 200}$$

- ☐ A. 40
- ☐ B. 50
- ☐ C. 45
- ☐ D. 55

Q8. Compute $81 \div 9$

- ☐ A. 8
- ☐ B. 7
- ☐ C. 6
- ☐ D. 9

Q9. Compute $144 \div 12$

- ☐ A. 11
- ☐ B. 14
- ☐ C. 13
- ☐ D. 12

Q10. $100 \div 3$ as quotient and remainder, checking the remainder is smaller than 3.

- ☐ A. 33 remainder 1
- ☐ B. 33 remainder 2
- ☐ C. 34 remainder 1
- ☐ D. 30 remainder 10

Section B - Medium

Q11. 12 into 456. Quotient?

$$12 \overline{) 456}$$

- ☐ A. 36
- ☐ B. 38
- ☐ C. 40
- ☐ D. 37

Q12. Compute $1234 \div 11$

- ☐ A. 112 remainder 3
- ☐ B. 112 remainder 2
- ☐ C. 113 remainder 1
- ☐ D. 111 remainder 13

Q13. Compute $729 \div 27$

- ☐ A. 26
- ☐ B. 29
- ☐ C. 27
- ☐ D. 28

Q14. 25 into 1000. Quotient?

$$25 \overline{) 1000}$$

- ☐ A. 35
- ☐ B. 45
- ☐ C. 50
- ☐ D. 40

Q15. Compute $2345 \div 15$

- ☐ A. 155 remainder 20
- ☐ B. 157 remainder 0
- ☐ C. 156 remainder 5
- ☐ D. 156 remainder 15

Q16. Compute $875 \div 35$

- ☐ A. 25
- ☐ B. 24
- ☐ C. 26
- ☐ D. 27

Q17. 23 into 5678. Quotient and remainder?

$$23 \overline{) 5678}$$

- ☐ A. 245 remainder 20
- ☐ B. 246 remainder 20
- ☐ C. 246 remainder 23
- ☐ D. 247 remainder 3

Q18. Compute $4096 \div 16$

- ☐ A. 246
- ☐ B. 266
- ☐ C. 255

☐ D. 256

Q19. Compute $3600 \div 45$

☐ A. 70

☐ B. 90

☐ C. 80

☐ D. 85

Q20. $999 \div 37$, then check by multiplying back.

☐ A. 27

☐ B. 26

☐ C. 29

☐ D. 28

Section C - Challenge

Q21. 45 into 12345. Quotient and remainder?

$$\begin{array}{r} 45 \overline{) 12345} \end{array}$$

☐ A. 274 remainder 5

☐ B. 273 remainder 15

☐ C. 275 remainder 0

☐ D. 274 remainder 15

Q22. Which check confirms that $5678 \div 23 = 246$ remainder 20?

☐ A. $246 + 20 + 23 = 289$

☐ B. $246 \times 20 = 4920$

☐ C. $23 \times 246 + 20 = 5678$

☐ D. $5678 - 246 = 5432$

Q23. What is the smallest number to add to 1000 to make it divisible by 24?

☐ A. 16

☐ B. 8

☐ C. 24

☐ D. 4

Q24. 456 sweets shared by 15 children. Each gets how many, leftover?

456 sweets, 15 children

- ☐ A. 31 each, 1 left
- ☐ B. 30.4 each, none left
- ☐ C. 30 each, 6 left
- ☐ D. 30 each, 16 left

Q25. Why must the remainder always be smaller than the divisor?

- ☐ A. Because remainders are always small numbers
- ☐ B. Because the divisor could otherwise fit in once more
- ☐ C. Because the quotient must be a whole number
- ☐ D. It is a convention with no reason

Q26. What is the smallest number to subtract from 1000 to make it exactly divisible by 24?

- ☐ A. 16
- ☐ B. 8
- ☐ C. 24
- ☐ D. 41

Q27. 1000 cm rope in 35 cm pieces. Whole pieces and leftover length?

1000 cm, pieces 35 cm

- ☐ A. 29 pieces, 15 cm left
- ☐ B. 28 pieces, 20 cm left
- ☐ C. 28.57 pieces
- ☐ D. 28 pieces, 35 cm left

Q28. A number divided by 17 gives quotient 25 and remainder 8. Find the number.

- ☐ A. 425
- ☐ B. 50
- ☐ C. 433
- ☐ D. 441

Q29. Compute $2,50,000 \div 125$

- ☐ A. 200
- ☐ B. 2500
- ☐ C. 20000
- ☐ D. 2000

Q30. $9999 \div 88$, then check divisor $\times$ quotient + remainder.

- ☐ A. 113 remainder 55
- ☐ B. 113 remainder 95
- ☐ C. 114 remainder 7
- ☐ D. 112 remainder 143

Answer Key

Q1: (A) (a) 21. Check: $4 \times 21 = 84$ exactly, so there is no remainder.

Q2: (B) (b) 50. The 0 in the quotient's ones column must be written, not skipped.

Q3: (B) (b) 12. Check: $8 \times 12 = 96$.

Q4: (C) (c) 25. Check: $5 \times 25 = 125$.

Q5: (A) (a) 12 remainder 5. Options (b) and (d) both have a remainder that is not smaller than the divisor.

Q6: (C) (c) 9. Check: $7 \times 9 = 63$.

Q7: (B) (b) 50. Check: $4 \times 50 = 200$.

Q8: (D) (d) 9. Check: $9 \times 9 = 81$.

Q9: (D) (d) 12. Check: $12 \times 12 = 144$.

Q10: (A) (a) 33 remainder 1. Option (d) has a remainder larger than the divisor, so 3 could have gone in more times.

Q11: (B) (b) 38. Check: $12 \times 38 = 456$ exactly.

Q12: (B) (b) 112 remainder 2. Check: $11 \times 112 + 2 = 1234$. Option (d) has a remainder bigger than the divisor.

Q13: (C) (c) 27. Check: $27 \times 27 = 729$.

Q14: (D) (d) 40. Check: $25 \times 40 = 1000$.

Q15: (C) (c) 156 remainder 5. Check: $15 \times 156 + 5 = 2345$. Option (d)'s remainder equals the divisor, so it is not finished.

Q16: (A) (a) 25. Check: $35 \times 25 = 875$.

Q17: (B) (b) 246 remainder 20. Check: $23 \times 246 = 5658$, plus 20 gives 5678.

Q18: (D) (d) 256. Check: $16 \times 256 = 4096$.

Q19: (C) (c) 80. Check: $45 \times 80 = 3600$.

Q20: (A) (a) 27. Check: $37 \times 27 = 999$.

Q21: (D) (d) 274 remainder 15. Check: $45 \times 274 = 12,330$, plus 15 gives 12,345.

Q22: (C) (c) $23 \times 246 + 20 = 5678$. Divisor times quotient plus remainder must return the dividend.

Q23: (B) (b) 8. The remainder is 16, so $24 - 16 = 8$ more completes the next multiple.

Q24: (C) (c) 30 each, 6 left. Option (b) is Kabir's calculator answer — true as a number, but you cannot hand out 0.4 of a sweet.

Q25: (B) (b) Because the divisor could otherwise fit in once more, meaning the quotient digit was too small and the division is not finished.

Q26: (A) (a) 16. $1000 \div 24$ leaves remainder 16, and removing the remainder leaves an exact multiple. Option (b) is what you ADD instead.

Q27: (B) (b) 28 pieces, 20 cm left. Option (c) counts a part-piece as a piece, and option (d)'s leftover equals a whole piece, so one more could have been cut.

Q28: (C) (c) 433. Use the check formula forwards: $17 \times 25 + 8$. Option (a) forgets to add the remainder.

Q29: (D) (d) 2000. Check: $125 \times 2000 = 2,50,000$. Options (a) and (c) are off by a factor of ten.

Q30: (A) (a) 113 remainder 55. Check: $88 \times 113 = 9944$, plus 55 gives 9999. Options (b) and (d) have remainders larger than 88.
